

RACHEL CHERTOK

(732)-677-9984 | chertok.r@northeastern.edu | rchertok@gmail.com | Boston, MA | [LinkedIn](#) | [GitHub](#)

Available July - August 2026

Computer Science and Business Administration student combining technical expertise with product management experience, specializing in data-driven solutions and AI-powered tools for business optimization.

EDUCATION

Northeastern University

Expected May 2027

- Khoury College of Computer Science | Boston, MA
- **B.S. in Computer Science and Business Administration** | Concentration in Fintech
- Relevant Coursework: Object-Oriented Design, Programming with Data, Algorithms, Computer Systems, Marketing, Financial Management, Managerial Accounting, Database Design, Investments

Research

Markov Chain Research for Predictive Models | Boston, MA

June 2025 - December 2025

- Used Claude AI prompt engineering and Python (networkx, numpy) to model memory-aware Markov Chains and analyze real-world citation networks for predictive accuracy in the finance world.
-

EXPERIENCE

Red Hat | Boston, MA

May - July 2026

Incoming Product Management Intern

- Product Management Intern on the Red Hat Enterprise Linux Public Cloud team, working across major cloud partners like AWS, Google Cloud, and Microsoft Azure.

Oasis NEU (Student Led) | Boston, MA

January 2024 - Present

Executive Board President

- President of a 150+ member programming club, coordinating events, technical mentorship, and project development initiatives that support beginner-friendly entry into software engineering.
- Guided development of 95+ React projects and organized events that increased engagement and technical skills.

Bevi | Boston, MA

July - December 2025

Software/Beverage Product Management Co-op

- Analyzed 2M+ machine usage events in Snowflake and built interactive Looker dashboards, enabling partner managers to track unit performance and flavor trends in real-time through advanced SQL segmentation in Hex.
 - Drove \$300K revenue increase through zero-cost product rebranding (Key Lime → Lime), leveraging user research to align product naming with customer expectations.
 - Initiated development of an AI-powered sales assistant using OpenAI's GPT API to generate customized machine and flavor recommendations based on office size, layout, and industry vertical, streamlining partner-facing sales processes and improving pitch consistency across territories.
-

PROJECTS

Sales Mailer | Personal Project

August - December 2025

- Designed and launched a React + Gmail API sales mailer website that automated email template creation and sending, reducing manual drafting time by ~60% for sales reps (who previously spent ~4 hours/day on emails).
- Implemented send history tracking to streamline follow-ups and reuse, improving rep efficiency and consistency across 100% of outbound communications.

Flavor Swaps/Voting Project | Bevi

July - August 2025

- Developed and deployed an AI-powered SKU optimization algorithm using Python, Snowflake, and Looker within Hex notebooks to identify low-performing beverage SKUs and recommend high-usage replacements, increasing concentrate consumption by 30% across strategic partner accounts.
 - Piloted algorithm with a partner across 110 sites with a flavor voting program and collected quant/qual feedback.
-

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL, HTML/CSS, C++, R, OpenAI, MySQL
- **Tools:** Jira, Slack, Trello, Google Suite, Snowflake, Looker, Hex, Git/GitHub, Visual Studio Code, Claude AI, Copilot

Chi Omega | Russian | Italian | Star Wars | Lord of the Rings | Skiing | Baking
